SOLUTIONS

Advancing the **technology edge**
in the art of insurance

Software Developer

About:

Asia Risk Transfer Solutions (ARTS) was founded with the mission of increasing insurance penetration in developing Asia. At ARTS, we develop innovative risk solutions and technologies for the insurance industry to scale businesses sustainably. This includes the design of new types of insurance products, the use of cloud-based software engines, data analytics and mobile technologies in practical modes of operations suited to local market conditions.

Core to ARTS is a group of individuals who are passionate about increasing insurance penetration with technology innovation. ARTS is looking for a full-time software developer who shares our vision and is interested in joining us. This role and exposure will help to shape technical expertise, nurture personal development, and accelerate career growth.

Website: www.asiarisktransfer.com

Responsibilities:

- Plan, strategise and execute software development
- System architecture design
- Technical design for backend components and front-end layers
- Actively participate in coding activities, reviewing pull requests and software testing
- Participate actively in ARTS agile team of developers
- Software scalability, performance, maintainability and security

What we like to see in applicants:

- Proficient in Javascript and various front-end technologies
- Experience with Angular 2 or similar frameworks
- Passion and positive attitude towards learning
- Commitment to deliver
- Strong communication skills
- Active learning initiatives such as personal projects or collaboration to open-source communities
